

Good Day to You!
Colored Pencil or Pen out to
correct Lesson 17.
Make today a great learning day!

May 14-9:38 AM

Lesson 18: Determining the Surface Area of Three-Dimensional

Figures

$$\text{SA of a Cube} = 6s^2$$
$$\text{SA of a Rectangular Prism} = 2(lw) + 2(lh) + 2(wh)$$

Classwork

Opening Exercise

- What three-dimensional figure will the net create?
- Measure (in inches) and label each side of the figure.
- Calculate the area of each face and record this value inside the corresponding rectangle.

May 14-9:08 AM

- d. How did we compute the surface area of solid figures in previous lessons?
- e. Write an expression to show how we can calculate the surface area of the figure above.
- f. What does each part of the expression represent?
- g. What is the surface area of the figure?

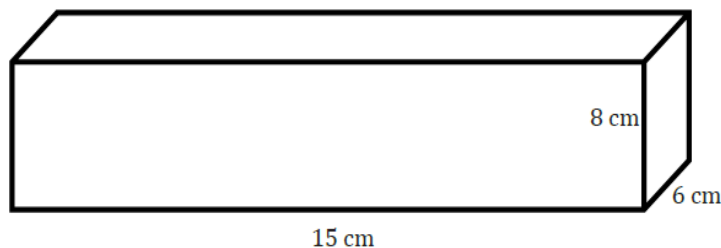

May 14-9:29 AM

Example 1

Fold the net used in the Opening Exercise to make a rectangular prism. Have the two faces with the largest area be the bases of the prism. Fill in the second row of the table below.

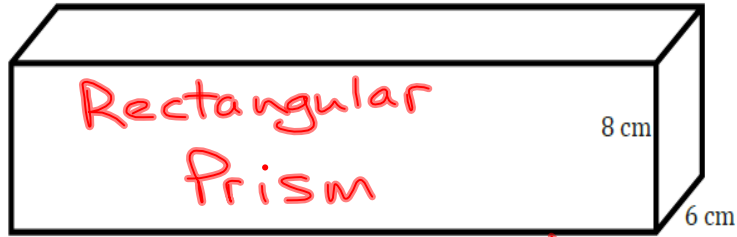

Area of Top (base)	Area of Bottom (base)	Area of Front	Area of Back	Left Side	Right Side

Examine the rectangular prism below. Complete the table.

May 14-9:30 AM

Examine the rectangular prism below. Complete the table.

$$SA = 2(lw) + 2(lh) + 2(wh)$$

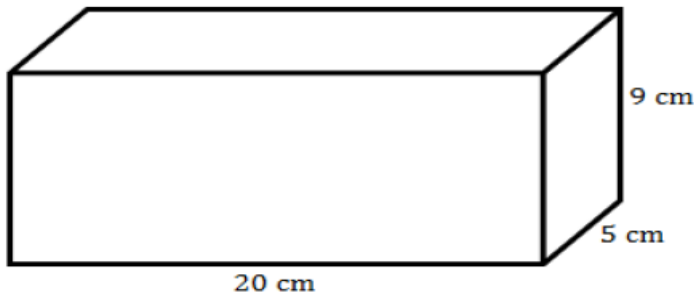

$$SA = 2(90) + 2(120) + 2(48)$$

Area of Top (base)	Area of Bottom (base)	Area of Front	Area of Back	Left Side	Right Side
lw	lw	lh	lh	wh	wh
15×6	15×6	15×8	15×8	6×8	6×8
90	90	120	120	48	48

Handwritten notes in red:
 $SA = 180 + 240 + 96$
 $SA = 516 \text{ cm}^2$

May 14-9:30 AM

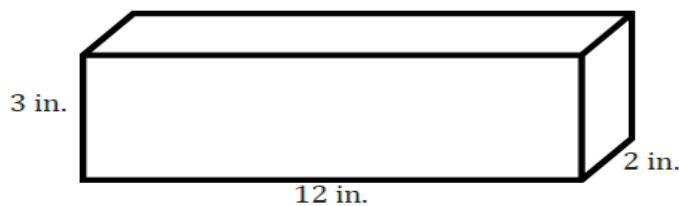

Example 2

Exercises

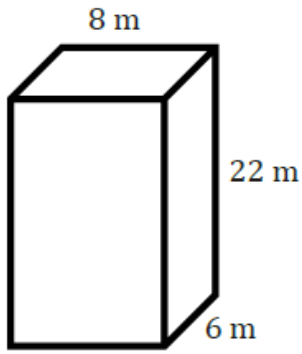

1. Calculate the surface area of each of the rectangular prisms below.

a.

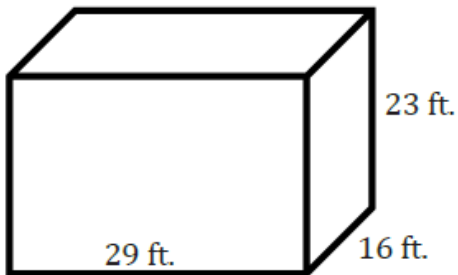

May 14-9:31 AM

b.

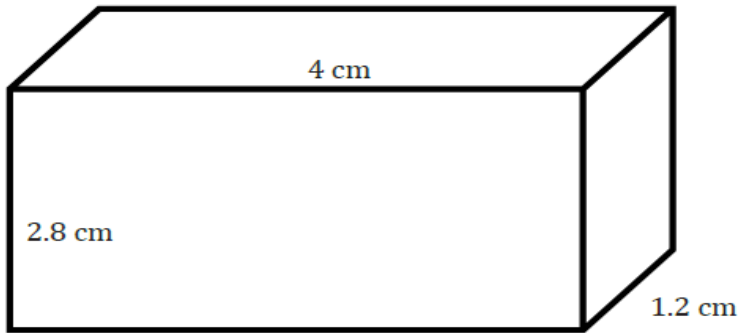

c.

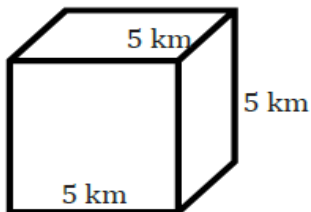

May 14-9:32 AM

d.

2. Calculate the surface area of the cube.

$$\begin{aligned} SA &= 6s^2 \\ SA &= 6(5^2) \\ SA &= 6(25) \\ SA &= 150 \text{ km}^2 \end{aligned}$$

May 14-9:32 AM

3. All the edges of a cube have the same length. Tony claims that the formula $SA = 6s^2$, where s is the length of each side of the cube, can be used to calculate the surface area of a cube.
- Use the dimensions from the cube in Problem 2 to determine if Tony's formula is correct.
 - Why does this formula work for cubes?
 - Becca doesn't want to try to remember two formulas for surface area so she is only going to remember the formula for a cube. Is this a good idea? Why or why not?

May 14-9:33 AM

Lesson Summary

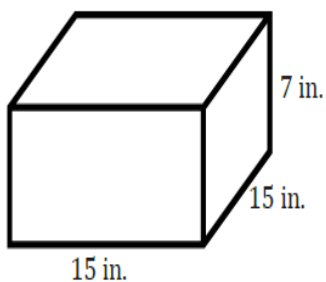

Surface Area Formula for a Rectangular Prism: $SA = 2lw + 2lh + 2wh$

Surface Area Formula for a Cube: $SA = 6s^2$

Problem Set

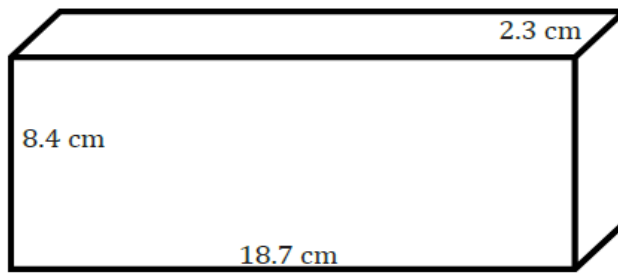

Calculate the surface area of each figure below. Figures are not drawn to scale.

1.

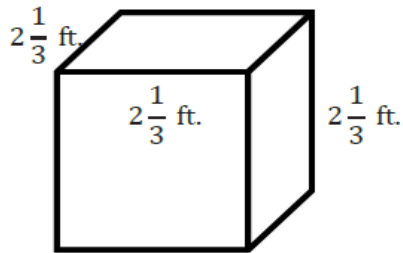

May 14-9:33 AM

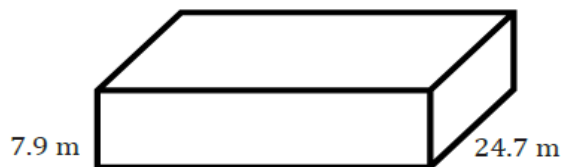

2.

3.

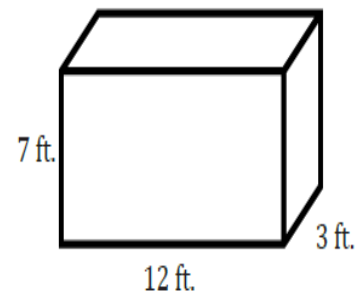

4.

May 14-9:34 AM

5. Write a numerical expression to show how to calculate the surface area of the rectangular prism. Explain each part of the expression.

6. When Louie was calculating the surface area for Problem 4, he identified the following:

$$\text{length} = 24.7 \text{ m, width} = 32.3 \text{ m, height} = 7.9 \text{ m.}$$

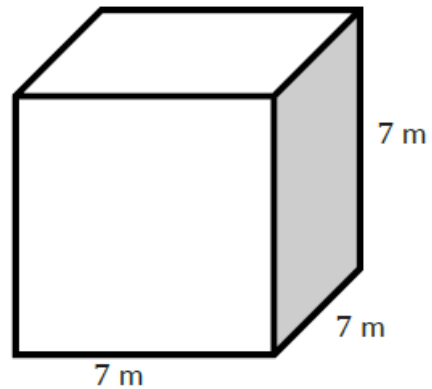

However, when Rocko was calculating the surface area for the same problem, he identified the following:

$$\text{length} = 32.3 \text{ m, width} = 24.7 \text{ m, height} = 7.9 \text{ m.}$$

Would Louie and Rocko get the same answer? Why or why not?

May 14-9:34 AM

7. Examine the figure below.

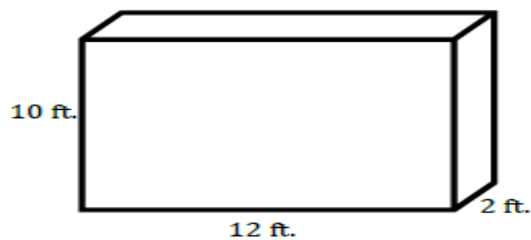

- What is the most specific name of the three-dimensional shape?
- Write two different expressions for the surface area.
- Explain how these two expressions are equivalent.

May 14-9:37 AM

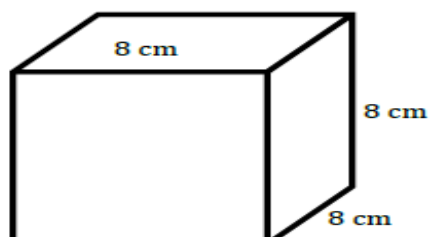

Exit Ticket

Calculate the surface area of each figure below. Figures are not drawn to scale.

1.

2.

May 14-9:37 AM
